

Product Code: **RT/ACB/NP/K16**

Product Code	RT/ACB/NP/K16
Description	Rivet spacer nosepiece used to set a large flange rivet with a 16mm head 0.3mm from the face of the façade panel
Application	To prevent damaging the panel and rivet during installation of the rivet and to allow for thermal movement

The standoff nose piece, also known as Rivet Spacer Nose Piece, is an attachment that is used during rivet installation to provide a controlled gap between the rivet head and the panel face. This gap will prevent the rivet head from being in direct contact with the panel face. A gap is intentionally created to accommodate thermal expansion

Benefits of installing a rivet with a standoff nose piece:

- Thermal movement of the panel in relation to the substrate will not transfer stress to the rivet.
- Panel deformation and/or surface damage will be prevented.
- The likelihood of cracking, distortion, and fatigue over time will be reduced.
- A consistent and repeatable method of installing a rivet will be ensured.
